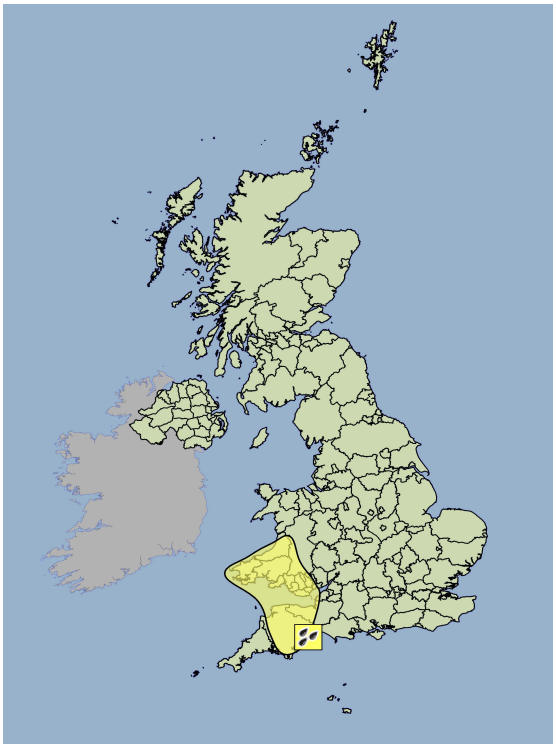
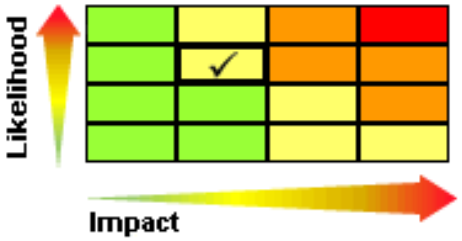
National Severe Weather Warning Service





Chief Forecasters Assessment
A deep area of low pressure will sweep a band of frontal rain quickly eastwards later on Sunday. Following this, a very unstable westerly flow will bring frequent heavy showers on Sunday night and through much of Monday. Over a 24 hour period, rainfall accumulations of 15 to 25 mm are likely quite widely, with over 40 mm across the high ground of Wales and the moors of southwest England. Given saturated conditions due to recent rainfall, there is potential for some surface water flooding, which will combine with very strong winds to lead to difficult driving conditions.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **15:00 on Sun, 07th Feb 2016** until **18:00 on Mon, 08th Feb 2016**

Rain will move quickly eastwards on Sunday afternoon and evening, followed by frequent showers overnight and through Monday. The showers are likely to be heavy at times and accompanied by hail and thunder, with very strong and gusty winds. Be aware of the potential for localised surface water flooding.
